ABSTRACT

The National Educational Finance Project has developed a computerized model designed to simulate the consequences of alternative decisions in regard to the financing of public elementary and secondary education. This manual describes a users orientation to that model. The model was designed as an operational prototype for States to use in a time-shared computer environment. It may also be used in an instructional mode for the workshop or classroom situation. The model is set up to run as either a remote job or in an interactive mode. The basic programming language used was P1/1 and the computer system was an IBM 360/65. The details of the language and the necessary hardware configuration are available in a technical manual also published by the project. Related documents are ED 052 513-520, ED 052 548, and ED 052 525-526. (Author)

The National Educational Finance Project has developed a computerized model which is designed to simulate the consequences of alternative decisions in regard to the financing of public elementary and secondary education. This manual describes a users orientation to that model. The model was designed as an operational prototype for states to use in a time-shared computer environment. It may also be used in an instructional mode for the workshop or classroom situation. The model is set up to run as either a remote job or in an interactive mode. The basic programming language used was Pl/1 and the computer system an IBM 360/Mod 65. The details of the language and the necessary hardware configuration are available in a technical manual also published by the Project.

A special acknowledgement is due Dr. Dewey Stollar, Professor, University of Tennessee, and Dr. Richard Rossmiller, Professor, University of Wisconsin, for their many helpful suggestions and critical comments during the conceptualization phase of the development of the model. Appreciation and thanks are also due Mr. David Taylor, A Systems Analyst consultant, and Mr. Gene Barlow, a research associate with the National Educational Finance Project, for their assistance and cooperation during the technical aspect of the development. In addition a very special thanks is due Dr. R.L. Johns, Director of the National Educational Finance Project, without whose patience and understanding this computerized finance model could never have been completed.

INTRODUCTION

You are about to take part in an educational finance computer simulation decision process. You and the rest of the participants will be acting as teams of state executives or policy makers making high-level decisions about the financing of public elementary and secondary education in your state. The decision process primarily involves alternatives related to target populations, educational programs, special services and facilities, distribution methods, and tax sources. Consider that these decisions are being made within a prototype state and are to meet the objectives (goals and beliefs) of that state as you would perceive them. Your decisions should be based on the information available and on detailed knowledge of your own background.

The "NEFP Decision Process" has not been developed for the one-time use of the Project, but is essentially a management information system model which may be installed in any state. As a tool for better decision making, the process has almost unlimited potential because of the infinite variety of data which can be accommodated and the ease with which new data may be added and new decision options made available for the participants. The potential is further enhanced by the relatively low hardware requirements for so complex a process.

The Prototype State

To test the computer simulation of alternative models of state support, the data base for a prototype state was constructed with conditions somewhat representative of the nation. All of the districts of the prototype state are real school districts and the data are actual data. The prototype state contains 32 districts which represent a wide range of conditions: large core city districts, medium size and small city districts, suburban districts, rural districts, districts with high and low equalized valuation, and districts with high and low personal income. These districts are described in detail in Part 2 (Prototype State). In addition the data base for the prototype state (Part 3 - Basic data bank) includes selected information relating to number of pupils, their participation in various programs, expenditure and revenue data, wealth measures, sociological information about the districts, and other related items. These data are included so that you may determine the impact of each school finance model on the state and also on a particular type of district. The assumption is that each of you may find a district or districts in the prototype state with which you can identify.

Decisions to be Made

After reflecting upon its general experiences and the research conducted by the NEFP, the project staff contends that state legislatures must answer

the following major questions as they enact legislation to finance the public schools:

1. What pupil populations will be served?
2. What kinds of programs should be recognized in the state aid program?
3. Will necessary variations in unit costs of different educational programs be recognized or ignored in allocating state funds?
4. What kind of educational services will be funded in the state plan?
5. Will the isolated small schools and the problems of the core city be considered?
6. Will state funds be apportioned on the flat grant basis which ignores differences in the wealth of local school districts, or on the equalization basis which provides more state funds per unit of educational need to districts of less wealth than to districts of greater wealth?
7. What proportion of school revenue will be provided by the state and what proportion will come from local sources?
8. What will be the total cost of the basic state program?
9. Where will we get the money to support the basic state program?
10. To what extent will the state permit local districts to provide services and experiences not supported in the basic state program?

To expedite these decisions, the primary educational finance decisions regarding state support programs have been classified according to three dimensions:

SET I: Program Decisions - decisions that refer to (a) the programs and units which are to be used in determining the state program, (b) the application of cost differentials, and (c) the special services and facilities and selected modifying factors which are to be provided.

SET II: Distribution Decisions - decisions that refer to (a) the total amount of state and local funds which will be provided to support a basic state program, (b) the distribution of the cost of this program between the state and local districts, and (c) the determination of the amount of local leeway which will be permitted.

SET III: Revenue Decisions - decisions that refer to (a) the tax sources, both state and local, which are to be used to provide funds for public elementary and secondary education, and (b) the rates which are to be applied to the various tax sources.

For ease of presentation the input decisions have been organized into both a short and long form set of decisions (Part 4 - Input Decisions). The short form contains a selected set of basic decisions and the long form a more expanded range of alternatives. Each decision is coded with a locator index to identify that decision.

Since one could generate an infinite combination of alternative models of state school financing, even the long form was not meant to be all inclusive. Instead the computer simulation is set up so that if your particular model is not included, you may write the equation for your model, run it, and then compare the impact of that model to some of the more traditional models. To add an even more dynamic phase to the computer simulation, a projection phase has been developed (Part 4 - Form C) so that those of you who wish to make decisions regarding the financing of education in the future may do so.

Basic Output Displays

A variety of basic data arrays may be selected as output displays for the computer simulation model. These arrays plus the locator index for each are presented in (Part 2 - Code Sheets). In addition special commands may be made for selected types of output. Examples of each are shown below:

AVE: This allows you to obtain an average of any of the basic or calculated data arrays.
Ex: Ave B485

CORR: This allows you to correlate any of the basic calculated data arrays.
Ex: Corr B485, B486

DECISIONS: This allows you to output a list of your input decisions.
Ex: Decisions

GRAPH: This allows you to graph by district, any of the basic or calculated data arrays either singly or in combination.
Ex: Graph C845

PRINT: This allows you to print, in tabular form by district, any of the basic or calculated data arrays.
Ex: Print B100, C845; C895

RANGE: This allows you to obtain the range for any of the basic or calculated data arrays.
Ex: Range B485

SCORES: This allows you to output an evaluation table with an overall model score for percent deviation from full equalization and a tax progressivity score.
Ex: Score

SUM: This allows you to obtain the sum for any of the basic or calculated data arrays.
Ex: Sum C500

Summary

There is no established procedure to follow in making decisions for your state. All decisions are inter-related and determine the success of your state in meeting its objectives. The decision-making philosophy of each state must be determined by the team acting for that state. Whatever decisions you make should be recorded on the input sheets provided and given to the discussion leader to be compiled. These decisions will be entered into a computer by way of a remote terminal and you may see an immediate feedback of the results of the effect of the decisions. Alternative decisions may then be made to determine the plan which you wish to implement.

The succeeding pages contain the district descriptions, code sheets, input decision sheets, and sample input and output.

Part 2

PROTOTYPE STATE

District No. 1

This suburban district adjoins the state's largest city. It is one of the ten largest communities in the state. It is traversed by one railroad, one interstate highway and several state highways. The district is predominantly residential in character, but does have one large manufacturing plant near its southern boundary. One of the state's largest shopping centers is located in this district and a substantial concentration of light industry has developed in the western portion of the district in recent years. Although originally a high income residential suburb, annexation and land development since World War II has produced a much broader tax base and a more heterogeneous population.

DETAILED INFORMATION

District No. 2

This suburban municipality immediately adjoins the state's largest city. It is traversed by two railroads, one state highway and one interstate highway. The district is surrounded on all sides by other large suburban communities. The population of this suburb ranks it among the largest in the state. The backbone of the economy is a very large heavy manufacturing plant, and there also are several small machine shops in the municipality. Much of the housing in the eastern portion of the district was built during the early 1900's; that in the western portion is of post World War II vintage.

District No. 3

This city, the second largest in the state, is located in the south central section. Six U.S. highways, three state highways and two interstate highways enter the city. Transportation facilities also include three railroads, three bus lines, and five airlines. The city has twelve banks and five savings and loans institutions. The area has several large shopping centers and is the retail center for a nine-county area. There are two daily newspapers with a combined circulation of 117,778. Industry is quite diversified, with only two or three large manufacturing plants. However, a large state university, several large insurance companies, and a number of state office buildings are located in the district and provide employment for many of the residents.

District No. 4

This suburban and rural district in the southern portion of the state is one of the most attractive residential areas in the nation. The southern portion of the district consists of a cluster of unincorporated communities adjacent to a large city in an adjoining state. The northern part of the district is still agricultural with an emphasis on dairying, livestock, and nurseries. Rural land values are the second highest in the state. Significant heavy industry is not found in the district, but scientific research and light industry are important to the economy. In addition, governmental installations also provide extensive employment opportunities. On most economic measures related to income and business activity, the district ranks among the top three districts in the state. Transportation services are provided by two interstates, three federal highways, three railroads, and a nearby large commercial airport. Higher education opportunities are provided through a local community college and numerous colleges in the city located in the adjoining state.

District No. 5

The rural district is located in the east central portion of the state, but is relatively inaccessible except from the north and east because of natural geographic conditions. Some portions of the district are isolated with resulting transportation problems, but over 75 percent of the land is arable. Agriculture production and food processing provide the principal employment opportunities. The economy is also enhanced by resort and vacation areas in the western portion of the district. A study of economic measures reveals that the district ranks at about the median on most measures. One federal highway, one railroad, and one airport with charter service provide the available transportation. Higher educational opportunities are limited to one private two year liberal arts college and a two year community college in an adjoining county.

District No. 6

This sparsely populated rural district located in the southeastern portion of the state is only accessible from north and west because of natural geographic conditions. Food production and agriculturally related activities constitute the principal sources of income and employment, with some additional activity related to resort and recreational attractions. On economic measures related to income the district ranks among the lower three; however, on measures relating to business activity, the district ranks near the median. Three federal highways and one railroad provide transportation services. No higher education institutions are located in the district.

District No. 7

This city is located in the west central portion of the state on two U.S. highways and two state highways. The city serves as the hub and trading center of a large agricultural area, the nearest large city being located nearly 100 miles away. The area is served by three railroads, five bus lines, and one airline. The largest single employer is a branch plant of a major tire company, but there are several other good-sized firms in diverse fields. The city has three banks and one savings and loan institution. The estimated 7,900 wage earners receive an average weekly pay of \$147.00. Two newspapers with a combined circulation of 36,403 are published in the city.

District No. 8

This small town is the service center for a large rural area. It is located approximately 50 miles from a medium sized metropolitan center. The town is served by two railroads and one airline. The area's largest employer is a manufacturer of heavy trucks and construction equipment. More important in the economy, however, are the dairy farms and the large vegetable farms surrounding the area. The district receives daily newspapers from outside the area and has its own weekly newspapers with a circulation of 2,756.

District No. 9

A part of the standard metropolitan area of the largest city in the state, this suburban and rural district has a land contour which varies from gently to strongly rolling. Land value is high, and dairying and livestock are the most profitable agricultural activities. The forest area is relatively large, but not commercially productive. Manufacturing industry is relatively small, but two research laboratories have been added recently and an electrical appliance firm is making plans to open production facilities employing over 4,000 employees. A study of economic measures indicates that the area ranks in the upper third in terms of income, but near the median on other measures. Two interstates, three federal highways, one railroad, and a major airport provide transportation services. A small community college provides the only higher educational opportunities available in the district but a variety of higher educational institutions are located in the nearby city.

District No. 10

This city is located near the center of the state. General farming and dairying are important contributors to the economy of the area. In addition, several important manufacturing firms are located in or near the city which is also well known for its medical clinic. There are three railroads, two bus lines and one local airline serving the city. The city has three major financial institutions--two banks and one savings and loan association. The local newspaper has a circulation of 13,131. The weekly salaries of local employees range from \$100 to \$170; the mean is \$130.

District No. 11

A rural district located in east central portion of the state, District 11 is a highly developed agricultural area with the largest farms in the state. Disposable agricultural products are about equally divided between crops and livestock. The chief industry is food processing. The economic base is further supplemented by a cluster of attractive summer resorts in the western portion of the district. However, on most economic measures the district ranks in the lower third. Two federal highways and one railroad provide transportation services. The only higher education institution in the district is a small liberal arts college.

*Indicates ranking in the state.

District No. 12

This largely suburban district is a part of the standard metropolitan area of the state's largest city. The outlying portions contain prosperous farms in which land values are the highest in the state. In the hilly central portion of the district large estates preserve some of the traditional customs of affluent country life. The district ranks either second or third on most of the major economic measures. One single heavy industrial plant employs over 20 percent of the total work force of the district, but over 200 other firms are also located in the district. Available transportation includes four interstates, three federal highways, four railroads, and a major airport. Two small liberal arts colleges and a state college are located in the district.

*Indicates ranking in the state.

District No. 13

This sparsely populated district located in the eastern part of the state has an economy largely based upon agriculture, food processing, and summer tourist activities. On virtually all economic measures the district ranks in the lower third. One federal highway and one railroad provide the principal transportation services. The only higher educational opportunities available in the district are provided through a small two-year community college.

District No. 14

This suburban district is part of the standard metropolitan area of the state's largest city. It is located 10 miles southwest of the city. The area is served by one railroad and one major highway. Ten years ago, dairying and truck farms were the most prominent elements in the economy. The area has suburbanized rapidly, however, and now it is primarily a "bedroom" suburb. Shopping centers, small retail stores and personal services predominate in the local economy. The area is served by a local weekly newspaper as well as two metropolitan daily papers.

District No. 15

This suburban and rural district is located in the south central portion of the state. The northern portion of the district is still mainly agricultural, but the southern portion which adjoins a large city in an adjacent state is densely populated and largely residential. A single cash crop dominates the agricultural economy, and the district ranks first in mining and quarrying. On virtually all economic measures, except those related to heavy industry, the district ranks either second, third, or fourth in the state. Transportation services are provided by three interstates, three federal highways, two railroads and a nearby large commercial airport. Higher educational opportunities are available through the state university and a state college located in the district.

*Indicates ranking in the state.

District No. 16

This district located in the far western portion of the state has the largest land area of any in the state. Slightly less than one fourth of the total area is mountainous; the remainder is fertile farmland. Farm productivity is high; consistently, the district ranks either first or second in the value of farm products sold. Manufacturing is diversified, and the general economy is strong. The district ranks in the upper half on all economic measures and in the upper third on most. One interstate, three federal highways, three railroads, and a small municipal airport provide transportation services. Three private liberal arts colleges and one community college provide higher educational opportunities.

District No. 17

This rural district is second in percentage of area in farm land and fourth in cash income from this source. In this rich agricultural area livestock and dairying account for over 70 percent of the farm products sold. Several small and stable manufacturing establishments also enhance the economic base of the district. On most economic measures the district ranks near the top third. Two federal highways and three railroads provide direct transportation services. One relatively small private college is located in the district.

District No. 18

District No. 18, a suburban-rural district with a city of 28,000, is a part of the standard metropolitan area of the state's largest city. With a rank of fourth in the number employed in manufacturing, the district has a consistent rank in the top ten districts in the state by most economic measures. Industrial plants and a large airport are located in the northern portion of the district which adjoins the state's largest city; farming is largely centered in the southern portion with some fishing and resort activity in the eastern portion of the district. Available transportation includes two interstate highways, two federal highways, two railroads, and an international airport served by ten major airlines. Two medium sized colleges have campuses in the district.

District No. 19

Crossed by two of the most picturesque mountain valleys in the nation, this rural district in the north central part of the state also contains the state's sixth largest city. Over two-thirds of the land area is devoted to productive agriculture; emphasis is on fruit production, livestock, and dairying. The economy is further bolstered by several heavy industries which make the district one of the leading industrial centers in the state. In addition, the largest city in the district also serves as a wholesale distribution center for portions of this state and two others. On virtually all economic measures the district ranks in the upper third. Transportation is available through two interstates, two federal highways, four railroads, and a local airport with scheduled commercial flights. Higher education opportunities are available through a coeducational junior college which offers both terminal and transfer programs.

District No. 20

Located in the southeastern portion of the state, this rural district with its flat, fertile, and productive land leads the state in the value of farm products sold. However, industry offers the greatest number of employment opportunities with firms for food processing, clothing manufacture, and transportation equipment. The largest city in the district is the most important commercial center in that portion of the state. The district ranks between the median and the top third on virtually all economic measures. Two federal highways, one railroad, and a small airport with scheduled service provide transportation services to the district. Higher educational opportunities are provided through a state college with an extensive program.

District No. 21

This largely rural district is located in the northeastern portion of the state; over four-fifths of the land area lies on a plateau which is partly rolling and partly hilly. The remainder of the land area lies on a flat flood plain. The rich soil supports diversified agriculture with dairy and livestock products having the highest commercial value. Some manufacturing firms are located in the district, but a large number of residents commute to jobs in the nearby large city. Two large government installations located in the district are important elements in the total economy. On most economic measures the district ranks near the upper third. Available transportation includes one interstate, two federal highways, two railroads, and two small local airports. Higher education opportunities are available through a local community college with an enrollment of approximately 1500 students.

District No. 26

Located in a relatively rural setting in the northeastern portion of the state, District No. 26 has a diversified economy based on agriculture products, light and heavy industry, and transportation services. On most economic measures the district ranks near the median. Potential economic development is enhanced by the location of a large hydroelectric installation in the district. One interstate, four federal highways and two railroads serve the district. A small community college is located in the district; but higher education opportunities and cultural, as well as economic advantages are enhanced by the nearby medium-sized city in an adjoining state.

District No. 27

This district is located in the southern portion of the state in a rural area with a gently rolling countryside. The district is one of five rural areas in the state which derives its main cash farm income from a single crop. Approximately 25 percent of the total work force is employed in wholesale and retail trade. Numerous patches of forests provide sources for valuable timber and related products. A single federal highway and one railroad provide transportation services to the district. On most economic measures the district ranks in the lower third. Higher education opportunities are limited to those available through a two year community college with approximately 1,000 students.

*Indicates ranking in the state.

District No. 28

This rural district lies in a somewhat isolated area in the southern portion of the state. Manufacturing installations are very limited as evidenced by recent reports which indicate that no firm employs more than 50 workers. On virtually all economic measures the district ranks in the lower third. No interstates, federal highways, or railroads serve the district, and air service is limited to a small airport with no commercial service. Higher educational opportunities in the district are only available through a small liberal arts college.

DETAILED INFORMATION

District No. 29

This suburban "bedroom" community is located approximately 15 miles from the states' largest city. It covers a large geographic area and, while growing rapidly, is still relatively sparsely populated. Two major highways serve the district, providing easy access to the city. Although there is some light industry located in the district, truck farming still predominates. The district, however, is undergoing a rapid transition from a predominantly rural to a predominantly suburban character.

*Indicates ranking in the state.

District No. 30

Located in an isolated portion of the northwestern corner of the state, this district contains some of the highest elevations and most rugged areas of the state. The terrain provides rich opportunities for both summer and winter sports. Agricultural production is very limited, and the number of industrial workers is small. The district leads the state in the production of timber and forest products. Coal is still mined in the district, but greatly reduced in quantity from previous years. The district ranks at or near the bottom on most economic measures. Available transportation includes three federal highways, two railroads, and charter service through the local airport. A community college is under construction, and a state college is located in an adjoining county.

DETAILED INFORMATION

*Indicates ranking in the state.

District No. 31

This rural district is located in the rich farming section of the eastern portion of the state. In addition to the diversified agricultural economy several small industries are involved in the production of farm-related products. On most economic measures, except the value of farm products sold, the district ranks in the bottom third of the state. Highways are limited to state roads, and one railroad provides service to the district. No airport is located in the district.

*Indicates ranking in the state.

District No. 32

Located in the southwestern portion of the state this rural district is relatively isolated from the rest of the state by natural geographic conditions. Food production and food processing are the principal industries with major emphasis on truck farming and poultry production. On virtually all economic indices the district ranks at or near the bottom for the state. One federal highway, one railroad, and two small airports provide transportation services. A branch campus of the state university provides a limited range of undergraduate higher education opportunities.

INPUT DECISIONS

INPUT DECISIONS*

(Form A)

SET I: PROGRAM DECISIONS

Program decisions refer to (1) the programs and the unit which are to be used in determining the state program (2) the application of cost differentials, and (3) the special services and facilities and selected modifying factors which are to be provided.

SET II: DISTRIBUTION DECISIONS

Distribution decisions refer to (1) the total amount of state and local funds which will be provided to support a basic state program, (2) procedures for distributing the cost of this program, and (3) procedures for providing incentives based on local tax leeway.

SET III: REVENUE DECISIONS

Revenue decisions refer to (1) the major tax sources, both state and local, which are to be used to provide funds for public elementary and secondary education, and (2) the rates which are to be applied to the various tax sources.

*Options on federal revenue and distribution decisions are not included in this version of the model.

SECTION I: PROGRAM UNIT

Explanation: Program Unit refers to decisions concerning both the programs (early childhood, basic, etc.) and the unit (ENR, ADM, or ADA, and pupil or instructional, unweighted or weighted) which are to be used in the determination of the state program.

Do you wish to include early childhood pupils in your computation of the state program? If "yes" check the appropriate boxes.

Early Childhood

3 yr. olds
Yes
☐
100

4 yr. olds
Yes
☐
101

Kindergarten
(5 yr. olds)
Yes
☐
102

Explanation: Check the unit (ENR, ADM, or ADA, and pupil or instructional, unweighted or weighted) which you wish to use and provide the requested information.

ENR Yes
☐
103

ADM Yes
☐
104

ADA Yes
☐
105

A. UNWEIGHTED PUPIL UNIT

Explanation: A "yes" indicates that you wish to use the unweighted pupil unit in the computation of the state program.

Yes

SECTION II: SPECIAL SERVICES and FACILITIES

Explanation: Special services and facilities refers to transportation, capital outlay and debt service, and school food service.

Check only those special services and facilities which you wish to include as a part of the state program and provide the requested information.

A. TRANSPORTATION

Present Expenditures		District Costs per Transported Pupil
Variable Unit Costs	\$17,249,834	High \$294
Approved Costs	\$16,664,566	Ave. \$ 60
Actual Costs	\$24,194,250	Low \$ 42

Alternatives (Choose one)

1. State allotment of a flat grant per transported pupil. \$
160
2. State variable unit allotment based on sparsity cost variations. Yes
☐
161
3. Local ownership and operation with state payment of approved costs. Yes
☐
162
4. State allotment of a fixed percentage of actual costs. . %
163
5. Equalized grant for actual costs with mills local effort required. . mills
164
6. State ownership and operation of full program. Yes
☐
165

B. CAPITAL OUTLAY and DEBT SERVICE

Present Expenditures		Dollar Value Depreciation Allowance	
Debt Service	\$ 78,806,663	Per Pupil	\$ 60
Approved Project	\$124,828,505	Per Inst. Unit	\$1500
Actual Project	\$147,536,425		

Alternatives (Choose one)

- State allotment of a flat grant for depreciation allowance.

Per Pupil	\$ <u>170</u>	
or		
Per Inst. Unit	\$ <u>171</u>	
- State allotment of a fixed percentage of approved project cost.

	<u>172</u> %	
--	--------------	--
- State allotment of approved project cost.

	<u>Yes</u>	
	<u>173</u>	
- Equalized grant for depreciation allowance with X mills local effort required.

Per Pupil	\$ <u>170</u>	<u>174</u> mills
or		
Per Inst. Unit	\$ <u>171</u>	
- Equalized grant for debt service with X mills local effort required.

	<u>175</u> mills
--	------------------
- Equalized grant for approved project cost with X mills local effort required.

	<u>176</u> mills
--	------------------
- Equalized grant for actual project costs with X mills local effort required.

	<u>177</u> mills
--	------------------

C. SCHOOL FOOD SERVICE

Present Expenditures on Annual Basis

Approved Cost

Food Only \$13,147,380

Food and Labor \$43,820,820

Actual Cost

Food and Labor: \$52,587,540

Per Participating Pupil \$108

Alternatives (Choose one)

1. State allotment of a flat grant per compensatory pupil only \$
180
2. State allotment of a flat grant per participating pupil \$
181
3. State allotment of approved cost of food only Yes
☐
182
4. State allotment of a fixed percentage of approved cost of both food and labor . %
183
5. State allotment of approved cost of both food and labor Yes
☐
184
6. Equalized grant for approved cost of both food and labor with mills local effort required . mills
185

S E C T I O N I I I . M O D I F Y I N G F A C T O R S

Explanation: Modifying factors refer to those additional factors besides the special services and facilities that you wish to be included in the state program.

Explanation: For A through E check those modifying factors which you wish to include in the form of an adjustment in the state program and provide the requested information.

A. RECOGNITION OF ADMINISTRATIVE, SUPERVISORY, and AUXILIARY SERVICES.

Explanation: Additional units for recognition of administrative, supervisory and auxiliary service (ASAS). You have two alternatives from which you may choose in determining the additional units. Select the method you wish and provide the requested information.

Alternatives (Choose one)

- | | | |
|--|--|---|
| 1. Additional units for administrative, supervisory and auxiliary service based on a percentage. | $\frac{\text{---}}{200} \cdot \text{---} \%$ | of units determined from Section I (Program Unit) |
| 2. Additional units for administrative, supervisory and auxiliary service based on a ratio. | $\frac{\text{---}}{201} / 1$ | ratio of units determined from Section I (Program Unit) per ASAS unit |

B. SPARSITY

Explanation: Additional units for schools with less than 200 pupils.

	Size of School	Prototype Pupil Weightings	Proposed Pupil Weightings
Elem. (1-6)	150 - 200	1.10	— . $\overline{205}$ —
	100 - 149	1.20	— . $\overline{206}$ —
	less than 100	1.30	— . $\overline{207}$ —
Jr. High (7-9)	150 - 200	1.30	— . $\overline{208}$ —
	100 - 149	1.40	— . $\overline{209}$ —
	less than 100	1.50	— . $\overline{210}$ —
Sec. (10-12)	150 - 200	1.50	— . $\overline{211}$ —
	100 - 149	1.50	— . $\overline{212}$ —
	less than 100	1.70	— . $\overline{213}$ —

C. EDUCATIONAL TRAINING and EXPERIENCE

Explanation: A "yes" indicates that you wish to use the following prototype indices in recognizing educational training and experience of professional staff as an adjustment in the state program.

Yes
☐
 220

Training Level

Exp. Level (Yrs)	Less than B.S.	B.S.	M.S.	M.S.+30	Doctorate
0-2	.80	.95	1.05	1.20	1.25
3-5	.80	.95	1.05	1.20	1.25
6-10	.80	1.00	1.10	1.20	1.25
11-20	.85	1.00	1.10	1.25	1.25
over 20	.85	1.00	1.15	1.25	1.25

D. COST OF LIVING

Explanation: A "yes" indicates that you wish to recognize cost of living as an adjustment in the state program. (Below is an illustration of a possible formula.)

$$\frac{\text{Cost of Living Index Dist.}}{\text{Cost of Living Index State}} = \text{Adjustment Index}$$

Yes
☐
 225

E. UNEMPLOYMENT

Explanation: A "yes" indicates that you wish to recognize unemployment as an adjustment in the state program. (Below is an illustration of a possible formula.)

$$\frac{\% \text{ Unemployment Dist.}}{\% \text{ Unemployment State}} =$$

Yes
☐
 230

Explanation: For F through I check those modifying factors which you wish to include in the form of a special allotment as a part of the state program and provide the requested information.

F. SPECIAL PROGRAM ALLOTMENTS

Explanation: Select those programs for which you wish to provide special allotments and provide the requested information. (All pupil units are expressed as FTE--full time equivalents.)

Note: If you used a weighted unit in Section I (Program Unit) for a particular program, then do not complete that corresponding section here.

1. Early Childhood

\$___ ___ per pupil in early childhood program
250

2. Special and/or Exceptional

\$___ ___ per mentally handicapped pupil
251

\$___ ___ per physically handicapped pupil
252

\$___ ___ per emotionally handicapped pupil
253

\$___ ___ per special learning disorder pupil
254

\$___ ___ per speech handicapped pupil
255

3. Vocational-Technical

\$___ ___ per pupil in vocational-technical education
256

4. Compensatory

\$___ ___ per pupil from family with low income
257

\$___ ___ per low achievement pupil
258

G. ACHIEVEMENT

Explanation: Special allotment for achievement. (Below is an illustration of a possible formula.)

\$ per pupil below 25th percentile
260

\$ per pupil above 75th percentile
261

H. HARDSHIP ALLOTMENT

Explanation: Special allotment for teachers serving in geographically remote areas (approximately 255 teachers)

\$ per teacher
265

or special allotment for teachers serving in ghetto areas (approximately 800 teachers).

\$ per teacher
266

I. INNOVATION

Explanation: Special allotment for approved cost of innovative programs.

\$ per pupil unit
270

SET II

DISTRIBUTION DECISIONS

ALTERNATIVE DECISION POINTS

SECTION I: BASIC STATE PROGRAM
(Page 1)

SECTION II: BASIC DISTRIBUTION METHOD
(Page)

SECTION III: INCENTIVE DISTRIBUTION METHOD
(Page)

SECTION I: BASIC STATE PROGRAM

Explanation: The basic state program refers to the fiscal allotment for local educational agencies from state and/or local revenue sources; this amount does not include special state allotments for school services and facilities, modifying factors, or incentive programs, and also does not include any local fiscal effort required for participation in these latter programs.

Note: If you desire the flat grant plus uniform local tax rate distribution method (Section II), omit this page. Specifying the flat grant plus the uniform local tax rate will determine the cost of the basic state program.

Explanation: You have three alternatives from which to choose to arrive at the cost of the basic state program. Check the method you wish to use and provide the requested information.

- A. The cost of the basic state program should be determined by applying a dollar cost to the units determined in Set I - Section I (Program Unit). \$ per unit
400
- B. The cost of the basic state program should be based on a proposed amount of funds to be made available in the prototype state. Proposed Amount
\$
401
- C. The cost of the basic state program should be based on a percentage of the state general fund which is determined in Set III - Section I (State Tax Sources.) . %
402

SECTION II: BASIC DISTRIBUTION METHOD

Explanation: The basic distribution method refers only to procedures for distributing the cost of the basic state program.

The basic funds provided by the state, together with the local educational agency, will equal the cost of the basic state program. The unit (pupil or instructional, weighted or unweighted) is based on a decision which is made in Set I - Section I (Program Unit).

Note: Decisions in regard to state and local tax bases and rates are made in Set III (Revenue Decisions).

Explanation: Check the distribution method which you wish to use and provide the requested information.

- A. FULL STATE SUPPORT of the cost of the basic state program.

Explanation: Under this method the state provides the full cost of the basic state program.

Yes
☐
420

- B. FLAT GRANT plus UNIFORM LOCAL TAX RATE to support the cost of the basic state program.

Explanation: This method involves a flat grant per unit from the state plus a required local effort. This effort is a mandated tax which each local educational agency is required to levy at a uniform rate.

The flat grant should be based on a proposed amount per unit.

\$ per
425 unit

- C. UNIFORM STATE MATCHING GRANT plus VARIABLE LOCAL EFFORT to support the cost of the basic state program.

Explanation: A uniform state matching grant is one in which the state provides a fixed percentage of the cost of the basic state program. The difference is provided by a variable local effort. Specify state percentage.

 . %
430

- D. UNIFORM LOCAL TAX RATE plus VARIABLE STATE GRANT to support the cost of the basic state program.

Explanation: Under this method each local educational agency is required to levy a tax at a rate which is uniform in each district. The difference between the cost of the basic state program and the amount provided by the required local levy is supplied by the state.

Yes
☐
435

E. PERCENTAGE STATE and LOCAL SHARING of the cost of the basic state program.

Explanation: Under this method the local educational agency's contribution to the cost of the basic state program varies according to its financial ability relative to the state average.

Yes
☐
 440

The general form of the computational formula is:

$$A = 1 - \left(\frac{D}{S} \times E \right) = \text{Basic State Aid, where}$$

A = cost of basic state program
 D = district's financial ability
 S = state average financial ability
 E = a predetermined constant based on the percentage of the cost of the basic state program which would be provided by a district of average financial ability.

The decision with regard to A was made in Section I (Basic State Program). To determine D and S, a decision is required with regard to financial ability which is defined as a tax base per unit. Thus, select both a base and a unit. Since a combination is possible for each, indicate the percentages you wish. If you choose a single financial ability measure, indicate the percentage as 100.

BASE	Percentage*	UNIT	Percentage*
Property	--- 445 ---	Per Capita	--- 450 ---
Personal Income	--- 446 ---	5-17	--- 451 ---
Sales & Gross	--- 447 ---	ENR	--- 452 ---
		ADM	--- 453 ---
		ADA	--- 454 ---

*Be sure the percentages add to 100 if you elect to use a combination measure.

To determine E (the predetermined constant), a percentage is required. Specify E.

--- . --- %
 460

SECTION III: INCENTIVE DISTRIBUTION METHOD

Explanation: The following are distribution methods for providing incentive for local educational agencies levying leeway taxes.

If you do not wish to use a local incentive, omit this page; otherwise, check the appropriate method and provide the requested information. The unit (pupil or instructional, weighted or unweighted) is based on a decision which is made in Set I - Section I (Program Unit).

Note: Decisions in regard to the tax bases and rates for local tax leeway are made in Set III (Revenue Decisions).

Explanation: Check the incentive method which you wish to use and provide the requested information.

- A. Incentive grant by matching local leeway taxes by a flat grant allotment. \$ 480 allotment per unit for each mill (or percent) of local leeway tax levied.
- B. Incentive grant by matching local leeway taxes in same ratio as provided in basic state program. Yes ☐ 485
- C. Incentive grant based on a state guaranteed allotment per each mill (or percent) of the local leeway tax levied.

The general form of the computational formula is:

$R(A - B) = \text{State's Allotment, where}$
 $R = \text{rate of local leeway tax}$
 $A = \text{state guaranteed allotment per unit (this allotment is supplemental to the basic state program)}$
 $B = \text{tax yield per unit from one mill (or percent) of the local leeway tax}$

The decision with regard to R is made in Set III - Section II (Local Leeway Taxes). Values for B are fixed and are presented on the cover sheet of Set III (Revenue Decisions - Base Data). To determine A, a decision is required with regard to both a state guaranteed allotment and a unit. The decision with regard to the unit was made in Set I - Section I (Program Unit). Specify the guaranteed allotment.

\$ 490 guaranteed allotment per unit

SET III

REVENUE DECISIONS

ALTERNATIVE DECISION POINTS

SECTION I: STATE TAX SOURCES
(Page 1)

SECTION II: LOCAL TAX SOURCES
(Page 2)

BASE DATA

Tax		Total Dollars	Dollars Per (K-12) Pupil ADM
Property	A rate of 1 mill yields	\$ 24,739,713	\$ 26.49
Personal Income	A rate of 1% yields	\$119,650,407	\$ 128.13
Corporate Income	A rate of 1% yields	\$ 9,734,282	\$ 10.42
Sales & Gross Receipts	A rate of 1% yields	\$ 68,339,700	\$ 73.18
Estate, Gift & Other	Present yield is	\$202,356,438	

SECTION I: STATE TAX SOURCES

Explanation: State tax sources refers to decisions concerning bases and rates for major tax sources for the state general fund. Select the source you wish to use and give a proposed tax rate. (If you select the Estate, Gift and Other tax source, give a proposed dollar yield.)

Based on the major tax sources currently being used in the prototype state, the state general fund is \$1,132,372,965.

Note: In Set II - Section I (Basic State Program) if you select alternative C (Percentage of state general fund), you must complete this page. The percentage is based on the amount of the state general fund determined in this Section.

BASE	Present Rate	Proposed Rate
Property	0 mills	___ . ___ mills 600
Personal Income	5%	___ . ___ % 601
Corporate Income	6%	___ . ___ % 602
Sales & Gross Receipts	4%	___ . ___ % 603
Estate, Gift & Other		\$ ___ 604

SECTION II: LOCAL TAX SOURCES

Explanation: Local tax sources refers to decisions concerning bases and rates for required local effort and local tax leeway.

A. REQUIRED LOCAL EFFORT

Explanation: If you select a required local effort as part of the basic state program in Set II - Section II (Basic Distribution Method), you have two alternatives from which to choose in specifying the local tax base and rate.

Note: In Set II - Section II (Basic Distribution Method) if you select flat grant plus uniform local tax rate, complete Alternative 1; if you select uniform state matching grant or percentage of state and local sharing, complete Alternative 2.

Alternatives (Choose one)

1. UNIFORM RATE for the required local effort.

Explanation: Basic state program where the local effort is based on a rate which is uniform in each district. Specify rate.

Base	Rate
Property	— — . — mills 620
Personal Income	— — . — % 621
Sales & Gross Receipts	— — . — % 622

2. VARIABLE RATE for the required local effort..

Explanation: Basic state program where the local effort is based on a rate which is variable in each district. Specify percentage of local effort from each base. (The actual rate will be computed and presented in an output display.)

Base	Percentage*
Property	— — — 630
Personal Income	— — — 631
Sales & Gross Receipts	— — — 632

*Percentages must add to 100

B. LOCAL TAX LEEWAY

Explanation: If you wish to use local tax leeway to allow the local educational agency to provide supplemental funds beyond the basic state program, provide the requested information; otherwise, omit this page.

Note: In Set II - Section III (Incentive Distribution Method) if you selected an incentive distribution method, you must complete this page. Incentive distribution methods assume local leeway taxes.

Alternatives (Choose one)

1. UNIFORM RATE for the local leeway taxes which you wish to use.
Specify rate.

Base	Rate
Property	___ . ___ mills 640
Personal Income	___ . ___ % 641
Sales & Gross Receipts	___ . ___ % 642

2. VARIABLE RATE for the local leeway taxes with an amount based on a maximum of 105% of the local educational agencies expenditures for the previous year. Specify percentage of local leeway tax from each base. (The actual rate will be computed and presented in an output display.)

Base	Percentage*
Property	___ 650
Personal Income	___ 651
Sales & Gross Receipts	___ 652

*Percentages must add to 100

INPUT DECISIONS

(Form B)

SET I: PROGRAM DECISIONS. Complete this set to determine (1) the programs and the unit which are to be used in determining the state program, (2) the application of cost differentials, and (3) the special services and facilities and selected modifying factors which are to be provided.

SECTION I: Refers to decisions concerning both the programs (early childhood, basic, etc.) and the unit (ENR, ADM, or ADA, and pupil, unweighted or weighted) which are to be used in the determination of the state program.

- | | | | | |
|---|--|--|--|--|
| | Early Childhood | | Kindergarten | |
| | 4 yr. olds | | (5 yr. olds) | |
| 1. If you wish to include early childhood pupils in your computation of the state program provide the requested information. | Yes

SECTION II: SPECIAL SERVICES and FACILITIES: Select the ones which you wish to include as a part of the state program and provide the requested information.

5. TRANSPORTATION (Choose one)

- a. State allotment of a flat grant per transported pupil. (District Costs: High--\$294/Ave.--\$60/Low--\$42) \$ 160
- b. State variable unit allotment based on sparsity cost variations. (Required state appropriation: \$17,249,834) Yes ☐ 161
- c. State allotment of a fixed percentage of actual costs: Cost--\$24,194,250 163

6. CAPITAL OUTLAY AND DEBT SERVICE (Choose one)

- a. State allotment of a flat grant for depreciation allowance. (NEFP Depreciation Allowance Per Pupil--\$60) Per Pupil \$ 170
- b. State allotment of approved project cost. (Required state appropriation \$124,828,505) Yes ☐ 173

SECTION III: MODIFYING FACTORS: Select the ones which you wish to include as a part of the state program and provide the requested information.

7. EDUCATIONAL TRAINING AND EXPERIENCE: A "yes" indicates that you wish to use NEFP prototype indices in recognizing educational training and experience of professional staff as an adjustment in the state program. Yes ☐ 220
8. COST OF LIVING: A "yes" indicates that you wish to recognize cost of living as an adjustment in the state program.
- $$\frac{\text{Cost of Living Index Dist.}}{\text{Cost of Living Index State}} = \text{Adjustment Index}$$
 Yes ☐ 225

9. Refers to the fiscal allotment for local educational agencies from state and/or local revenue sources; this amount does not include special state allotments for school services and facilities, modifying factors, or incentive programs, and also does not include any local fiscal effort required for participation in these latter programs.

To determine the cost of the basic state program, select the alternative you wish to use and provide the requested information.

- a. The cost of the basic state program should be determined by applying a dollar cost to the units determined in Set I - Section I (Program Unit). \$ per unit
400
- b. The cost of the basic state program should be based on a proposed amount of funds to be made available in the prototype state. Proposed Amount
\$
401

Note: Decisions in regard to state and local tax bases and rates are made in Set III (Revenue Decisions).

(Choose one)

- a. FULL STATE SUPPORT of the cost of the basic state program. 420
- b. FLAT GRANT plus UNIFORM LOCAL TAX RATE to support the cost of the basic state program. Indicate the proposed amount per unit and proceed to 11a. \$ ____ per unit
425
- c. UNIFORM STATE MATCHING GRANT plus VARIABLE LOCAL EFFORT to support the cost of the basic state program. Under this method the state provides a fixed percentage of the cost of the basic state program. The difference is provided by a variable local effort. Specify state percentage and proceed to 11b. ____ . ____ %
430
- d. UNIFORM LOCAL TAX RATE plus VARIABLE STATE GRANT to support the cost of the basic state program. Check box 435 and proceed to 11a. Yes
☐
435
- e. PERCENTAGE STATE and LOCAL SHARING of the cost of the basic state program. If you checked box 440 select both a base and a unit to be used in determining local ability. Since a combination is possible for each, indicate the percentages you wish. Be sure the percentages add to 100.* Yes
☐
440
